

Data Privacy Policy for GPT Models: The Father, Adamah, Spirit, and Judges

1. Introduction

This policy outlines the data handling practices for our GPT models - The Father, Adamah, Spirit, and Judges. Designed primarily for conversational and consultancy-based services, these models aim to enhance user experience through interactive engagement. The collection, use, and management of data are central to these models, aligning with our commitment to user-centric service and privacy.

2. Data Collection and Purpose

We collect data exclusively during user interactions, primarily through text inputs. This data, encompassing the content and context of user queries, enables our GPT models to understand and respond effectively. The purpose of this data collection is to facilitate accurate, context-aware interactions, ensuring a high-quality user experience.

3. Use of Data

Data collected is used exclusively for enhancing the conversational capabilities of our GPT services. We do not share user data or analyses with third parties. The data is transient; once a conversation is terminated, the associated data is deleted, ensuring privacy and data minimization.

4. Data Storage and Security

We implement robust security measures, including end-to-end encryption and stringent access controls, to safeguard user data. Personal information is not stored permanently. Instead, we employ pseudonymization for sensitive data like names and locations. This approach allows us to maintain the utility of the data for service improvement while prioritizing user privacy.

5. User Rights and Control

In our current framework, specific user data is not recorded, thus maximizing user privacy and control. Users have the right to access, modify, or request deletion of their data. Consent for data analysis is obtained implicitly through the use of our services. Future updates may offer enhanced user control features for more personalized interactions.

6. Compliance and Cooperation with Authorities

Our data privacy practices are designed to be in full compliance with applicable legal requirements. We are committed to cooperating with law enforcement and regulatory authorities as required by law, ensuring a responsible and lawful operation.

7. Changes to the Policy

We reserve the right to modify this policy. Any significant changes will be communicated through our website, keeping users informed and up-to-date with our privacy practices.

8. Contact Information

Users can reach out with privacy-related concerns or inquiries through our GitHub page comments section. We are committed to addressing user concerns promptly and transparently.

9. International Data Transfers

Currently, our data handling practices are localized, aligning with the privacy laws of each operational region. We do not engage in international data transfers, ensuring compliance with local data protection regulations.
